

Since its introduction in 1971, Purogene® has been recognized internationally as the premium disinfectant in airline water storage systems. Its low toxicity and high efficacy against pathogenic bacteria and biofilm make it the most versatile disinfectant in the water treatment industry.

With increased consumer and regulatory focus on water quality, Bio-Cide International, Inc. has developed the Purogene® Airline Sanitation System (P A S S) specifically for the airline industry to easily and safely deliver activated Purogene® for potable water disinfection and water treatment...

The PASS systems are designed to deliver concentrations of Purogene® accurately at high levels for disinfection or low levels for water treatment without the need for electricity. A dual system is also available that can do both disinfection and water treatment. In any case, the PASS remains directly proportional to the volume of water entering the unit.

Available in stainless steel or high impact fiberglass, Wall Mounted PASS Systems are recommended for areas where potable water is obtained to fill water carts and/or trucks (Stainless steel option with optional 110v strip heater is recommended for areas where freezing could occur).

Disinfect and sanitize potable water systems with convenience using the Portable PASS System. This rugged stainless steel system is well suited for hanger or ramp operations and is available with external controls. Easy to move from aircraft to aircraft, trucks, or carts.

Full Water Cabinet PASS Systems are designed to replace standard jetway units for the ramp or hanger.

- Compact designs
- Simple to install; easy to maintain
- Water powered, no electricity needed
- Reliable performance
- On-demand dispensing eliminates waste
- Unaffected by changes in water pressure and flow

All systems are available as dual concentration units.

PASS

Purogene®
Airline Sanitation System

PASS Advantages:

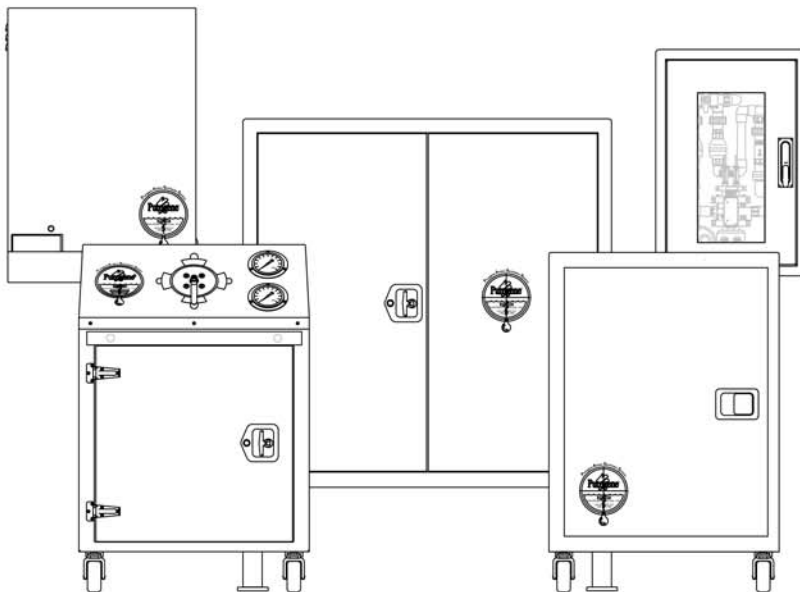

- Several Models Available
- Adjustable and Easy to Use Controls, and Guages
- Stainless Steel Construction; Long-term Durability and Strength
- Weather and Vandal Resistant
- Eliminates Manual Mixing
- Locking Doors with Heavy Duty Hinges
- Louvers to Allow Ventilation
- Removable, Predrilled Backboard

PASS Options:

- Heat Strips; Lamps
- Low Level Indicators for Chemicals
- Internal, or External Hose Reels

Hose Options:

- Retractable Hose Reels:
 - 25' 3/4" Hose
 - 50' 3/4" Hose
- Motorized Rewind Reels:
 - 125' 3/4" Hose
 - 200' 3/4" Hose
